modulo itinerario, percorso	(MAPP04)	Modulo per web app e mobile per la richiesta di informazioni riguardo alla pianificazione di un percorso che preveda eventuali tappe intermedie e la loro visualizzazione interattiva. Dovrà essere possibile imporre vincoli sui mezzi da utilizzare e su come indirizzare il calcolo (percorso più veloce più economico, più sostenibile), etc. si veda requisiti del pianificatore e delle API che permetteranno a questo modulo di funzionare.
modulo profiling, comportamento virtuoso	(MAPP05)	Modulo per web app e mobile per la richiesta di informazioni riguardo alle info personali e preferenze ed al suo comportamento passato (e.g., prevalenza bus, car, moto, bike, etc.). Suggerisce comportamenti virtuosi, come l'uso di mezzi a minor impatto ambientale, l'uso di scambiatori, anche arrivando ad offrire bonus se possibile, prendendoli da un carnet di Bonus della PA o delle TPL.
modulo suggestion del tempo e nello spazio	(MAPP06)	Modulo per web app e mobile che sfrutta gli algoritmi di pianificazione accessibili via API per fornire suggerimenti nel tempo e nello spazio. Per esempio: hai tempo passa da Mario, visto che sei qui visita XX, perché non parcheggi qui visto che hai ancora 20 minuti, oppure anche semplicemente dato un certo punto GPS impostando il tempo a disposizione, viene suggerito un percorso che suggerisce di visitare punti di interesse in base alle preferenze dell'utente.
modulo parcheggio easy	(MAPP07)	Modulo per web app e mobile che permette di monitorare lo stato dei parcheggi o di un parcheggio in particolare per evitare di arrivare al parcheggio senza sapere se vi sarà posto. Questo, avendo i dati, potrà essere usato in riferimento ai parcheggi coperti o lungo strada.
modulo ECOGUIDA	(MAPP08)	Modulo per web app e mobile che sfrutta gli algoritmi di profilazione e la valutazione del comportamento dell'utente per suggerire soluzioni di mobilità alternative. Utilizza le smart City API per accedere ai dati delle abitudini della persone, delle alternative, dei servizi presenti sul territorio, etc. ECOGUIDA
modulo tieniti in forma	(MAPP09)	Modulo per web app e mobile che sfrutta gli algoritmi di profilazione e la valutazione del comportamento dell'utente per suggerire soluzioni di mobilità che possono tenerlo in forma. Utilizza le smart City API per accedere ai dati delle abitudini della persone…….
modulo lascia un commento, "che ne pensi……"	(MAPP10)	Modulo per web app e mobile che sfrutta gli strumenti di geolocalizzazione dell'App per capire dove si trova l'utente e se è rimasto fermo per un certo periodo in qualche punto di interesse o che ci è stato, gli può chiedere conferma, ma anche richiedere un contributo: un commento, un score, una foto. Utilizza le smart City API per accedere ai dati delle abitudini della persone e capire i servizi geolocalizzati, etc.
modulo servizi commerciali, "ma lo sai che ?"	(MAPP11)	Modulo per web app e mobile che sfrutta gli strumenti di geolocalizzazione dell'App per capire dove si trova l'utente e se è rimasto o sta passando a piedi o in auto per un certo punto di interesse. Che magari gli può interessare sulla base del suo profilo. Il sistema gli invia una notifica in push (il telefono chiede ed il server invia) dove si informa che riguardo a quel punto si possono promuovere commercialmente cose interessanti.
modulo partecipativo, "sarebbe opportuno che …"	(MAPP12)	Se si trova in modalità navigazione la destinazione è nota e lo fa il navigatore. Ma se la sua destinazione non è nota si può dargli una mano con questo modulo. Modulo per web app e mobile che sfrutta gli strumenti di geolocalizzazione dell'App per capire dove si trova l'utente e fornirgli delle indicazioni sulle strade che potrebbe prendere per raggiungere le sue destinazioni abituali tenendo conto anche di eventuali incidenti e traffico, e per ridurre il carico su certe direttrici.
modulo "sapevi che nel…."	(MAPP13)	Modulo per web app e mobile che sfrutta gli strumenti di geolocalizzazione dell'App per capire dove si trova l'utente e se è rimasto o sta passando a piedi o in auto per un certo punto di interesse. Che magari gli può interessare sulla base del suo profilo. Il sistema gli invia una notifica in push (il telefono chiede ed il server invia) dove si informa che riguardo a quel punto si possono raccontare aspetti presi da WikiPedia o da altra sorgente. Possibile necessità di caricare un modulo computazionale aggiuntivo in piattaforma Sii-Mobility (per elaborare e fare cache delle info estratte da dbpedia o da altri) oppure una base di dati.
